Analytics Engineer (Data Modeling • dbt • SQL • Cloud Warehouses)

Analytics Engineer with 5+ years of experience designing ELT pipelines, building dbt data models, and delivering BI-ready datasets in cloud data warehouses. Specialized in dimensional modeling, data quality testing, and building governed semantic layers consumed by analysts and business stakeholders.

WORK EXPERIENCE

Independent

02/2025 - Present

Data Analyst & Developer

Toronto, ON

- **Analytics Engineering & Data Modeling (dbt Cloud, BigQuery, Power BI):** Designed an end-to-end analytics engineering workflow for U.S. mortgage credit-risk analysis using Freddie Mac datasets. Built tested, version-controlled, and documented dbt models to create semantic marts in BigQuery for BI consumption, and delivered an interactive Power BI dashboard to monitor delinquency trends by state and lending channel.
- **Automated Data Pipeline Engineering (Python, Streamlit):** Engineered an automated end-to-end data pipeline to track global mindfulness trends via Google Trends API, including scheduled ingestion and data quality checks. Implemented Prophet for time-series forecasting and deployed a live Streamlit dashboard with daily automated cron updates.
- **SQL Data Modeling & Infrastructure (PostgreSQL):** Implemented ELT pipelines and dimensional modeling via complex SQL transformations across 6,000+ hospitals to evaluate infrastructure quality. Optimized 28+ queries to support a multi-view Tableau reporting suite, identifying regional gaps in emergency services.
- **Machine Learning Implementation (Python, LightGBM):** Built and tuned a credit risk model using LightGBM and Optuna. Integrated SHAP values for model explainability and deployed results to interactive dashboards for non-technical stakeholders, improving transparency and model governance.

Ipsos

08/2022 - 01/2025

Data Analyst

Toronto, ON

- **Data Ingestion & Transformation:** Executed light data engineering tasks for Tier-1 clients (Visa, Microsoft), ingesting raw, unstructured data and standardizing it into clean, analysis-ready datasets for downstream reporting.
- **Process Automation & Tooling:** Developed custom Excel-based automation tools to validate incoming datasets, significantly reducing manual error rates and processing time for raw survey data.
- **Advanced Analytics Implementation:** Served as the primary technical resource to lead the operational adoption of a Random Forest machine-learning model, including co-authoring technical training documentation for internal teams.
- **High-Volume Lifecycle Management:** Orchestrated the production of 30+ high-accuracy reports per month, managing the full data lifecycle for 2-3 complex concurrent projects weekly (scaling to 10+ during peak quarters) without missing a single deadline.
- **Technical Deliverables Management:** Managed all technical data deliverables for high-value accounts (Visa), ensuring client retention through rigorous data handling and discrepancy resolution.
- **Operational Leadership & QA:** Managed cross-functional data workflows with offshore processing teams (India), leading troubleshooting sessions and QA audits to ensure 100% data accuracy before modeling.

preCharge

01/2017 - 08/2019

Data Analyst

New York, NY

- **Role Evolution & Process Engineering:** Advanced from Operations Administrator to Data Analyst in under 6 months by proactively introducing OSINT investigation techniques that slashed data retrieval time by 50%, allowing the firm to scale client acquisition without adding headcount.
- **Automation & Efficiency:** Replaced manual data entry processes with optimized Excel tracking templates utilizing macros and data validation, reducing manual error rates by 20%.
- **Data-Driven Policy Development:** Analyzed historical transaction data to identify fraud trends, presenting findings that directly shaped the logic for internal risk thresholds and client onboarding policies.
- **Digital Analytics Strategy:** Managed the company's Google Analytics and Salesforce data strategy, using insights to optimize content ranking for high-value keywords and drive inbound leads.
- **Fraud Investigation Operations:** Conducted deep-dive forensic investigations into 40-60 transactions daily, utilizing geolocation and social media verification to validate high-value orders.

EDUCATION

Master of Science in Data Science CUNY School of Professional Studies Focus: Advanced Statistical Modeling, Research Methodologies.	New York, NY • 01/2020
Bachelor of Science in Applied Mathematics City Tech, CUNY Activities: Actuary Club, Math Club.	New York, NY • 01/2018
Associate of Science in Computer Science City Tech, CUNY	New York, NY • 01/2016

CERTIFICATIONS

dbt Fundamentals Certification dbt Labs	12/2025
---	---------

SKILLS

- **Languages & Core:** Excel (VBA), Python (Pandas, Scikit-Learn, Optuna, PyTrends), R, SPSS (Syntax), SQL (PostgreSQL, MySQL)
- **Machine Learning & Stats:** A/B Testing, Bayesian Modeling (BVC, IBN), LightGBM, Prophet (Time-Series), Random Forest, Regression, SHAP (Explainability)
- **BI & Visualization:** Google Analytics, Power BI (DAX, Power Query), Salesforce, Streamlit, Tableau
- **Engineering & Strategy:** BigQuery, dbt (tests, docs, exposures), Dimensional Modeling, ELT, ETL Automation, Git/GitHub, KPI Tracking, OSINT (Fraud)
